

Kuder® Skills Assessment

Skills

This skills assessment measures your beliefs about doing different work-related activities. Jobs are divided into the 16 groups – called career clusters – below. Jobs are grouped in this way because they have similar characteristics. For example, all the jobs in the Architecture and Construction cluster are jobs for people who have creative, mechanical, and construction skills, among others.

The career cluster for which you believe you have the most skills is the one with the longest bar. The cluster for which you believe you have the least skills is the one with the shortest bar and appears at the bottom of the graphic below. The number to the right of the bar tells you how much skill you believe you have compared to others. For example, if the number to the right of the bar is a 97, it means that 97 percent of students your age believe they have less skill in this cluster than you do.
