

TOP 5 REASONS TO CHOOSE

1 It's an evidence-based system.

Aligned with John Holland's career theory and work environments, it sets the stage for exploration by launching students into planets representing different work environments: Realistic, Investigative, Artistic, Social, Enterprising, and Conventional.

2 It promotes lifelong learning and career development.

Galaxy lays the foundation for formal career assessments and career exploration activities that students will complete in the coming years.

3 It promotes equity.

By avoiding common assumptions about gender roles and prestige, Galaxy highlights 120 occupations and supports achievement of grade-specific career awareness goals and objectives.

4 It's flexible and scalable.

Galaxy's segmented content makes it easy to implement: fill an entire class session or unit, focus on segments in a classroom station or center, or complete a planet each month.

5 It supports career program success.

Administrative tools provide access for mapping the system's content and "I Can" statements to learning targets tied to state and local standards or frameworks, Social Emotional Learning (SEL), The Leader in Me®, and others.

"I was delighted to see a web-based program being offered to this often forgotten developmental age group."

Julie Cerrito, Ph.D.

Assistant Professor of Counseling and Human Services
The University of Scranton
Scranton, Pennsylvania
